

Features of new version

1. The possibilities of the **Enter negotiated counter orders** form, which is used to submit multiple counter orders from the **Orders** table for OTC trades, have been expanded:
 - The **Comment** parameter has been added to indicate a note on orders;
 - The ability to specify order price which will be used if it is no worse than the price in the counter negotiated order.

For details, see sub-section 3.21.7 of the User's Manual.
2. The ability to display the level of positions on futures contracts in the graph window has been added.
3. In the windows for editing tables, graphs and trader messages, the ability to search for an instrument by ISIN code and instrument code has been added.
4. The logic of the **Set depo account by client code** setting has been changed. If the found trading account is not added to the list of available accounts in the **Trading** section, then the **Trading account** field on the order entry form will be empty.

Issues resolved

1. The operation of the QUIK Workstation when replacing client codes with full names has been optimized.
2. The work in order entry forms, windows for editing tables, graphs and traders messages in the presence of a large number of instruments has been optimized.
3. In some cases, the value of the **Firm name** field was not substituted on the algo orders entry form.
4. The values of discounts transmitted through the Moscow Exchange ISS information interface were not taken into account.
5. When using filters in the **Client portfolio** table, data on clients might not be displayed.
6. Crash when working with the **Level II Quotes** table that does not have an instrument defined.

Changes in QUIK Workstation 11.3.0

7. It was not possible to request a report on positions, if you did not have permissions to set positions.
8. When an OMS order from the form was accepted for processing, it mistakenly switched to the **Draft** status.
9. When registering market OMS orders for bonds, the "Volume must be positive" error could occur.
10. In some cases, the order entry form did not close when pressing the **Esc** button.
11. There was no option to save reports in Excel format.
12. An error, due to which it was impossible to get a stop order with a stop price for an instrument from another class from the **Transaction pocket**.
13. When submitting orders by volume for REPO with CCP from the **Orders** table, their volume was mistakenly changed in the submitted transaction.
14. Incorrect alignment of values in the columns of the **OMS orders/trades** table.
